

## Keyboard Commands for DETROIT

The keyboard commands for **DETROIT** have been set up to be as straightforward as possible for players who can't (or don't wish to) use a mouse, or for players who find some aspects of the game easier to work with through the keyboard. Most of the game can be played from the keyboard by following a few simple rules. A few screens, however, require special information.

**Command Buttons:** Nearly all commands which are represented through mouse command buttons can be executed from the keyboard by pressing the letter key highlighted on the button itself. For plus and minus buttons, use the plus and minus keys except for those on the second design screen (see accompanying diagram.)

**Lettered Lists:** Press the letter of the item you want to select it from a lettered list. In some cases, the item can be deselected by pressing the letter a second time.

**Exiting Screens:** Press **Escape** to exit the current screen. Each time the key is pressed, you will go back one level, so it may be necessary to press it more than once to get all the way out. In many places, pressing **D** (for "Done") will also allow you to exit.

**Archives:** To access the archives, go to the Main Factory screen and press **C**.

**Model Testing:** To test your new car designs, press the first letter of each test desired. (Acceleration = A, Braking = B, and so on.) Press **T** to select all the tests, and **R** to run.

### Reports and Graphs

*Profit/Loss:* To toggle from income by territory to income by model, press **T**.

*Territory:* To toggle each column of information, press the number of that column (i.e. to toggle the third column, press **3**.) To cycle through the territories, press **N**.

*Model:* To toggle each column of information (ignoring the first which does not toggle), press the number of that column. To cycle through the territories, press **N**.

*Market T:* Press **T** to see marketing totals. Press **N** to cycle through the territories.

*Market M:* Press **T** to see marketing totals. Press **N** to cycle through the media types.

*Distribution:* Press **N** to cycle through the territories. Press **1** to toggle between supply lines and transportation expenses.
