PROLOGUE

Mio and Mayu, twin sisters, are visiting their childhood home. This spot, a secret hideaway for the pair, is due to be swallowed by a lake come the end of the summer.

Lost in her memories, Mio finally raises her head to find that Mayu has vanished. Looking around, Mio spots her sister following a crimson butterfly deeper into the forest.

Mayu runs through the forest, as though led on by the fluttering insect. As she runs, her fleeting form begins to be overlaid with that of a woman dressed in white.

Chasing after her sister, Mio suddenly finds herself alone on a foggy mountain road.

Carried on the wind, a sad song floats to her ears. Then, she starts to see lights through the gaps in the trees.

As though accepting their unspoken invitation, Mio follows the rows of festival lights.

However, when the dense forest opens into a clearing, it is Mayu who is standing there, alone, surrounded by countless crimson butterflies.

"...Mayu?"

Responding to Mio's call, Mayu slowly turns. The crimson butterflies dance away, as one.

"The Lost... village..."

Spreading there before the twins, crouching in fog and darkness, lays a mysterious village...

THE GAME SETTING

The vanished village, All God's Village.

This village is said to have once stood in the forest, deep in the mountains. This forest is now due to be lost with the creation of a new dam.

The story goes that, on the eve of a special festival, the village just suddenly vanished, leaving the forest wreathed in thick fog.

Many also say that, if you should happen to get lost in this forest, you will be spirited away to this lost village.

The village where the crimson butterflies dance.
The village held forever in the grip of a never-ending night.

GAME BASICS

The aim of the game is to take control of the main character, Mio, and along with her sister Mayu escape from the vanished village.

Take up the Camera Obscura, that has the power to photograph ghosts, and solve the mystery of this forbidding village.

Exploring the Village

In order to escape from the village, you must search for clues that will help you solve its dark riddle.

Pressing the  button inside houses, or in various places in the village, will allow you to search that location.

You may also find hidden items!

Using the Camera

There are some things you can only see through the camera's viewfinder, or in a photo.

Sometimes, even if the filament is not responding, there is still something to find. Be aware of the sounds around you, and the vibrations in your hands, and take photos until you are satisfied that you have missed nothing.

-> p13 (Finder Mode)

Since Type-14 films and above have a limited number of uses, use the unlimited Type-07 film when searching an area.

*** When the filament is reacting, or you can hear some kind of noise, be sure to use the camera and take lots of pictures. There are many things that cannot be found just by searching.**

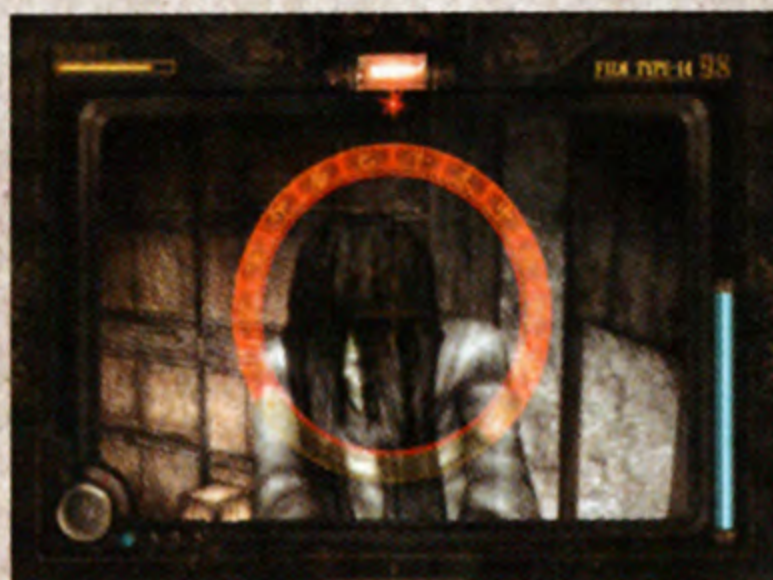

Ghosts

Fighting Ghosts

Some types of ghost will attack you, and others will not.

The filament will react by turning red if a violent ghost draws near. You must then use the camera to fight the ghost.

-> p26 (Strategies for Fighting Ghosts)

Messages from Ghosts

Many of the actions taken by the ghosts who wander the village contain some kind of meaning. Investigate the houses or roads to which they lead. What is more, the words that they speak or the files lying around contain many useful messages. If you lend your ears to these messages, you may well gather more clues on the best way to proceed.

Not all ghosts will attack you, and some will even give hints on how to proceed.

Mayu

Mayu's Actions

At most times, Mayu will follow Mio (the player) around. However, she may stop if something catches her attention, or call to Mio to come and look. At these times, there is likely to be a hint located close to Mayu's position.

Mayu and Death

Mayu cannot fight off a ghost's attack on her own. If she is attacked for too long then she will die, so be sure to use the camera to save her from ghost attacks.

Game Over

If Mio (the player) runs out of health, or if Mayu is attacked by ghosts for an extended period of time and dies, the game is over.

THE GAME SCREEN

Advance through the game, changing between Field Mode and Viewfinder Mode as circumstances dictate.

Viewing the map or using items during the game takes place on the Menu Screen.

Field Mode

During this mode, you control Mio directly and explore the village and its houses.

The capture circle will turn blue if a non-violent ghost or hint is within it, and red if a violent ghost is within it.

PLAYING ADVICE

Here is some helpful advice for those who are a little stuck, or who want to understand the game better.

Powering Up

Using Spirit Orbs and points on the camera will power it up. Take a look at the power up items you will find during the game, and the camera functions that can be powered up.

Items Required to Power Up

Spirit Orbs

Using a Spirit Orb, which you will come across during the game, will raise the maximum potential level of the camera.

*** Even if you have enough points, you cannot raise a level without having first used the corresponding number of Spirit Orbs.**

Points

Points are earned by photographing ghosts. The better you photograph, the more points you will receive.

The better the picture of a ghost, the more points you will earn.

Functions to Power Up

Basic Functions

Improve the basic functions of the camera. A fixed amount of points is required to upgrade each level.

Range: Increases the size of the camera's Capture Circle.

Accumulation: Increases the number of stocked spirit power you can have, and thus the maximum number of uses of Power-Up Lenses.

Sensitivity: Increases the camera's sensitivity to ghosts (= damage), as well as increasing its range.

Power-Up Lenses

You will obtain these special Lenses as the game progresses.

There are various types, and by equipping and then using them they will affect ghosts in various ways. However, they require stocked spirit power in order to be used.

The amount of spirit power required depends on the type of Lens.

Power-Up Lenses, just like the camera's basic functions, require Spirit Orbs and points to be powered up.

Slow: Photographing a ghost with this Lens equipped will reduce its speed for a short time.

Blast: Allows you to take a powerful photo that will push a ghost away. Using this Lens in conjunction with a shutter chance will cause even more damage.

Power-Up Lenses allow you to slow a ghost down, or to cause massive damage.

Additional Functions

The function of these parts is added to the camera just by picking them up. The effect of each is represented by a single Kanji (Japanese) character.

Indicator - The flashing of a red lamp will alert you to a Fatal Frame, that vital instant hidden within a shutter chance.

Equipped Functions

The functions of these parts can be added to the camera by equipping them. The effect of each is represented by a single letter. You can remove them again after equipping them.

Measure - With this equipped you will be able to see the health points of ghosts.

Strategies for Fighting Ghosts

The following is an explanation for fighting ghosts. First, take a look at the basics of camera combat.

Fundamental Fighting

1 Find a Ghost

The filament will react strongest if a ghost is in front of Mio. Use the reaction of the filament to locate ghosts.

You will also hear any noises made by the ghost coming from the direction in which they are in, so you can also use sound to locate a ghost.

Filament

A red filament means that a ghost is near!

2 Observe

When you find a ghost, first watch its movements carefully, looking for the moment in which the Ghost Wave Gauge is highest.

3 Aim for a Shutter Chance

A shutter chance is when the Ghost Wave Gauge turns red. Taking a photo now will have the added effect of pushing the ghost back.

When the Ghost Wave Gauge turns red, shutter chance!

4 Take Photo

Then, you just need to take a photo! A clean, well-timed photo will damage the ghost.

Advanced Strategy

5 Lower the Camera and Run

If a ghost gets close to you while you are still in Viewfinder Mode, you will quickly be overwhelmed.

When a ghost gets too close, the controller will vibrate strongly. Look for an opening, lower the camera and quickly put some distance between you and the ghost. This will help you to avoid taking damage.

6 Use Power-Up Lenses

Put the various features of the Power-Up Lenses to good use.

Slow [Some ghosts against which Slow is effective]

- Ghosts with tricky movement patterns, or that move quickly.
- Ghosts on which you just can't seem to get a shutter chance.

[Effect] Slows down the ghost's movements and makes it easier to keep them in the viewfinder. Also, lengthens the ghost's shutter chance time by the same amount that they have been slowed, making a shutter chance easier to snap.

Blast [Some ghosts against which Blast is effective]

- When surrounded by numerous ghosts.
 - Against powerful enemies with high HP.
- [Effect] With the ability to knock back ghosts, Blast can help create an escape route if you are surrounded. Also, if used in conjunction with a shutter chance you can cause even more damage. This is great for dealing quickly with an enemy that has high HP.

7 Aim for the Fatal Frame

During shutter chance, the red lamp will sometimes come on. This instant is known as the Fatal Frame.

The timing of the Fatal Frame is different for each ghost. For some, it only comes after they have missed an attack.

If you take a photo during this instant, the ghost will be severely knocked back and you will receive a large number of points.

Also, as they are being hit backwards, you may find the chance for a further Fatal Frame! A certain Power-Up Lens will make this instant easier to spot...

8 When Grabbed by a Ghost

If a ghost gets hold of you, wriggle the left analog stick as fast as you can. This will shake the ghost off faster, and reduce the damage that you receive.

CHARACTERS AND ITEMS

An introduction to the characters and items that appear during the game.

Character Introductions

Mio Amakura

The main character

The younger of the twins. Has a bright and outgoing personality. Her desire to always protect Mayu comes from the responsibility she feels for an accident that injured Mayu when they were children.

By taking her hand, she can sometimes see the "unbelievable" scenery that her sister does, but overall she is not as sensitive to the paranormal as Mayu.

Mayu Amakura

Mio's sister

Gentle, withdrawn and thoughtful. Physically quite weak, and relies heavily on her sister Mio. Fell from a mountain path when playing with Mio as a child, leaving her legs weak. Due to this, she rarely runs. Although she is very sensitive to the paranormal, she has little resistance to it, and is often used by ghosts as a medium.

Itsuki Tachibana

A boy with white hair whom Mio meets in the village.

He is a prisoner, and gives advice to Mio through a small window in his cell.

Seijiro Makabe

An expert in folklore, he comes to the vanished village in order to research its mysterious customs.

Using a strange photographic device, he wants to record the village and its customs.

Items

Items are hidden in many places. As well as those in plain sight, search cupboards, desks, and anywhere that looks suspicious.

Camera Obscura

An old camera that you will find during the game.

It has the power to display the "impossible," and capture the lingering thoughts of ghosts or seal them away.

As well as being used to fight ghosts, it will also help you find hints to aid your progress.

Type-07 Film

An old film, its surface is weakened and it has low effectiveness against ghosts. However, it will never run out, no matter how much it's used.

Type-14 Film

A slightly more effective film than the Type-07. Has a limit on the number of times it can be used.

Herbal Medicine

Old pills. Using them will recover a little health.

Sacred Water

Purifying water. Using it will restore your health to the maximum.

Stone Mirror

This stone gives off a strange light. If you should die while holding it, it will save your life just once.

Spirit Stone Radio

A radio that can hear the voices of various ghosts.

3. If the Tecmo service technician is unable to solve the problem by phone, he will provide you with a Return Authorization number. Simply record this number on the outside packaging of your defective disc, and return your disc freight prepaid, at your risk of damage, together with your sales slip or similar proof-of-purchase within this 90-day warranty period to:

If the disc develops problems after this 90-day warranty period, you may contact the Tecmo Consumer Division at the phone number noted above. If the Tecmo Service technician is unable to solve the problem by phone, he may provide you with a return Authorization number. You may then record this number on the outside packaging of the defective disc and return the defective disc freight prepaid to Tecmo, enclosing a check or money order for \$10.00 payable to Tecmo, Inc. Tecmo will, at its option, subject to the conditions above, repair the disc or replace it with a new or require disc. If replacement discs are not available, the defective disc will be returned and the \$10.00 payment refunded.

WARRANTY LIMITATION:

ANY APPLICABLE IMPLIED WARRANTIES, INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, ARE HEREBY LIMITED TO NINETY DAYS FROM THE DATE OF PURCHASE AND ARE SUBJECT TO THE CONDITIONS SET FORTH HEREIN.
