IVORY

The original Twisted Metal was made mainly by people who had spent many years creating vehicle simulations exclusively for the military. For these team members, creating a virtual world that felt and controlled exactly like reality was always the goal. And quite often, they succeeded far beyond expectation. But while the team has long since thrown off the shackles of reality and simulation, emerging as some of the brightest and most creative game makers in the business, you can imagine how difficult the transition must have been when they went from the world of simulations to the world of action/arcade games! It was certainly a challenge, going from highly detailed tank simulations to demon possessed ice cream trucks, from multi-million dollar fighter jets to motorbikes driven by the Grim Reaper himself! In order to help the team shift from real world to a darker, more twisted, more imaginative version of real world, ~~Some~~ SCEA commissioned hundreds of pieces of concept art. Some got used, other images were rejected straight out. But all of the concept art aided the team in taking that first step into the dark, demented world that we now call Twisted Metal.
